Kírók KÖMI 2

KÖMI Traffic Engineering Bureau, Engineering, Environmental, Water Management Services Ltd. was established in 1996 by private individuals with the principle of high level engineering services, quality control and quality assurance.

The continuous innovation ensured us to offer international standard solutions in the field of consultancy, for the implementation of road and railway infrastructure investments, in projects related to environment and natural resources and in structural projects financed by various asset types. We emphasize on strong project management and effective quality assurance in all projects.

The management and the colleagues of KÖMI Ltd. have set five core values showing direction to the Company for achieving the best results:

- Reliability
- Innovation
- Readiness
- Commitment
- Collaboration

KÖMI Ltd. is member of the Association of Hungarian Consulting Engineers and Architects, Hungarian Road and Railway Society, Hungarian Chamber of Engineers and Hungarian Project Management Alliance and international organizations such as FIDIC and EFCA. We operate in accordance with the following quality systems ISO 9001:2005, 14001:2005, 28001:2008 (18001:2007), SCC Certification.

Our colleagues have technical supervisor, expert and responsible technical manager licenses in the fields of civil engineering and traffic construction. Most of them are in the designers register and all of them are members of the Hungarian Chamber of Engineers.

Our well-trained and highly experienced engineers speak English, German and other foreign languages.

Our colleagues are at the service of our partners and customers in the following fields:

- Building, Traffic and Infrastructure construction civil engineering services
- Geotechnics
- Traffic safety
- Urban Planning & Development
- Asset Management
- Public Procurement

ÉRTÉK ÉS MINŐSÉG NAGYDÍJ PÁLYÁZATI RENDSZER

Our future is to be committed towards quality. - János László Somogyvári managing director, KÖMI Ltd.

What does commitment to quality mean to KÖMI Ltd.? Our goal is to ensure that the services we provide, the investment management, technical and control activities meet the requirements of customers, buyers and contractual quality requirements. We are confident that the expertise of our staff and our commitment to quality and reliability will result in a good market share, and the work undertaken by us will bring new orders. Our future is to be committed towards quality.

Why did you join the Value and Quality Tender System?

We believe that our country cannot grow to the advanced industrialized countries just by manufacturing and assembling foreign products.

This tendering system aims to promote and support products being in 100% domestic developments and thus provide significant added value. This approach is supported by all responsible Hungarian companies according to their interest and tasks. Innovation must be an integral part of the business strategy of domestic businesses. The primary interest of our company's primary is to keep up the current offers of the construction market and its most advanced technologies.

In your opinion, what benefits can the producers of the winning products enjoy?

One of the most important results due to the Award is to explore new markets. Businesses having joined the Application are all recognized members of their industrial sector meaning a significant network of contacts as well. Sharing these relationships and exchanging experiences can all contribute to the appearance of a product manufacturer in new markets, as well as to the increase of its efficiency

and market share. The other immediate result is that Applicant becomes entitled to use the Value and Quality Award Trademark guaranteeing the outstanding quality of the product to customers and thus contributing to the increase of sales.
